

HRS items land next to their ELSA counterparts in embedding space

- ▲ HRS item
- ELSA ADL/IADL
- ELSA other

t-SNE projection of 60-dimensional LSA embeddings of variable descriptions: 14 HRS items and all 403 ELSA derived variables. Dashed grey lines connect each HRS item to its hand-coded true ELSA counterpart; short lines mean the embedding placed them close together without being told they match. t-SNE distances are not metric, so read adjacency, not scale. The layout is illustrative; the accuracy figures in the following figure are computed on the full-dimensional cosine similarities, not on this projection.
